

Bullboard Final Demo

CSE 312 - Fall 2021

Presentation Contents

Introduction

Get to know the developers!

BullBoard

Learn about the project and see a live demo!

Project Details

Our methods and approach plus a technical report!

Reflection

What we would do differently and what went well!

01

Introductions

Group Name: Bad Glitches Only

Meet the team

Ethan

Full-Stack Engineer
Senior

Lauren

Front-End Engineer
Senior

Cindy

Back-end Engineer
Junior

Jay

Full-Stack Engineer
Senior

Zayaan

Back-end Engineer
Junior

02

Bullboard

CSE 312 Web Application

UB Housing Made Simple

Bullboard is a social media app made exclusively for University at Buffalo students. It provides a space to connect with roommates or find housing options!

The Breakdown

Login

Only Open to UB Students, Info Encryptions

Register

Uses Regex for requirements

Newsfeed

Where you can make wanted ads or posts to everyone

Profile

Edit your profile, add an image, personal info

Messages

Send a private message to one user
*In Progress

Live Map

Collaborate with roommates to mark up campus maps

Active Users

Shows both online and offline users!

03

Project Details

A Technical Overview

Tech Stack

Python

Back-end

Aiohttp Library

JavaScript

Ajax requests

Generating elements

MongoDB

Collections: users,
posts, active,
messages

HTML & CSS

Front-end pages

Open-Source Report:

AIOHTTP

- Handles routing for endpoint requests
- Constructs responses
- Let's you specify what types of request methods you want for each endpoint

Open-Source Report:

PROS

- Interesting to learn about licenses
- Cool to see how things actually work
- Intuitive & Straight forward

CONS

- The report was quite tedious and time consuming
- Easy to lose track of where you are in the code
- Still need to finish this up by Friday

Endpoints

GET

| | | |
|----------------|--------------------------|-----------|
| / | /login | /register |
| /newsfeed | /profile | /edit |
| /map | /messages | /logout |
| /websocket | /images/prof_pics/{name} | |
| /images/{name} | /messages/{ubit} | |

POST

| | |
|------------------|-----------------|
| /login_attempt | /create_account |
| /add_post | /edit_profile |
| /messages/{ubit} | |

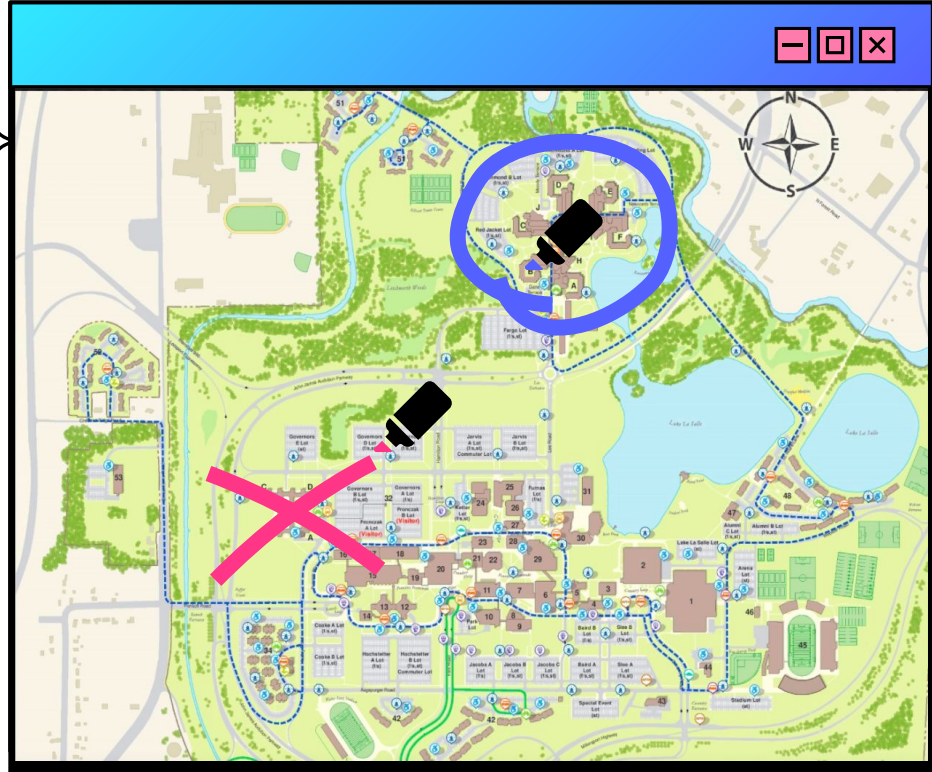

Goals:

Update Live Map

🌀 User 1

🌀 User 2

- Add Colors
- Fix minor drawing bugs
- Add more maps
 - South Campus
 - Downtown

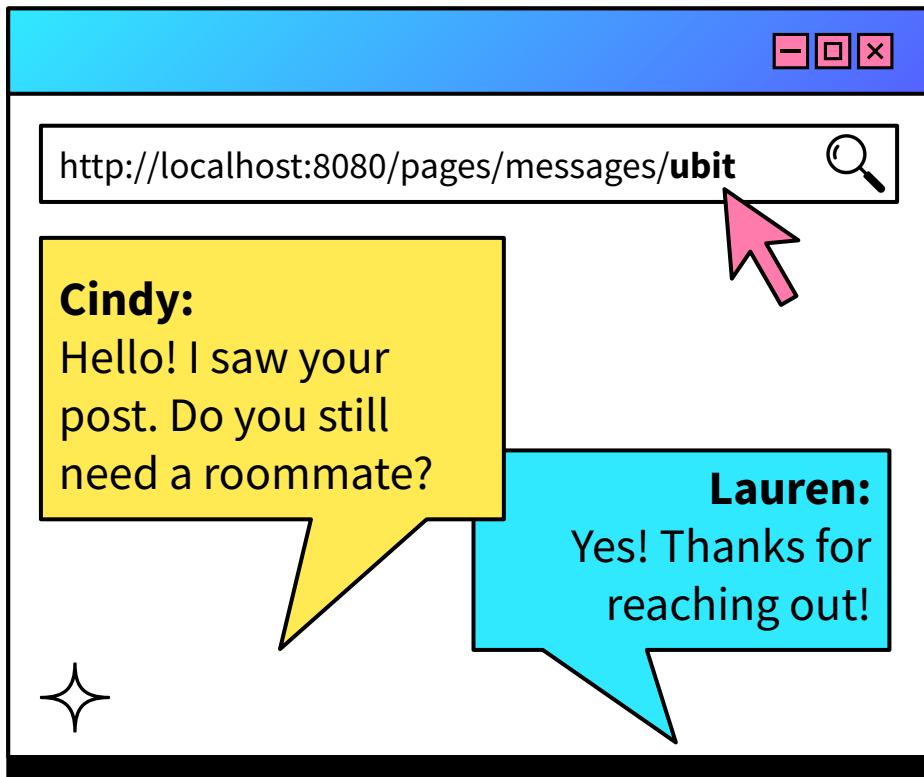

Goals:

Direct Messages

🔑 User 1

🔑 User 2

- Use ubit stored in the database and create new direct messages between two users
- Link to this page can be found on the newsfeed posts
- If someone makes a post, you will have the option to message them directly!

04

Reflection

CSE 312 Web Application

Project Setbacks

Websockets

Live interaction
with users for
the maps

Report

Open-Source
Report
formatting

Security

Handling
cross-site
request forgery

Bugs

Server crashes,
debugging and
database pulling

Start Early

We definitely should have tried to start the project earlier in the semester. Finding mutual times to meet was hard!

Learn React

Creating a full front-end from scratch isn't easy and caused a lot of headaches. Learning a framework would have helped!

Start Small

Our project goals were ambitious from the beginning of the semester. We got sucked into extra features that were not 100% required.

Success!

We actually really enjoyed learning about
web apps and many of us plan to take
CSE 370 this spring to get more experience
with Full-Stack development!

Thanks!

Do you have any
questions?
